# **MISSION: Give flight to alternative business thinking.**

Bluware is on a mission. We want to put your business at the forefront of innovation. We want to accelerate entire business cycles and transform how the industry thinks about finding and developing oil fields.

Following the recent merger with Hue AS and Headwave Inc., Bluware develops and sells Headwave, an ultra-modern software platform that is unconstrained by data size or compute complexity.

With the latest advances in Headwave, Bluware is creating entirely new possibilities in the E&P industry, challenging the status quo and introducing a way of working previously thought to be unattainable.

## **Leap ahead with the Headwave Software Platform**

Think possible. Think now.

While most software providers spend time chasing each other's features, we have designed Headwave to deliver a step-change for the petrotechnical world. It's a whole new way of working that lets you jump ahead to the answer, skipping many time-consuming tasks that have always been assumed as the way things get done.

The Headwave platform is built on an amazing Core Engine that strips away typical computing constraints. This means you can work with all the data all the time. It means you can work at the speed of thought. And it means you can start augmenting workflows with automation to complete valuable activities in virtually the blink of an eye.

## *Data-Driven Transformation in geology, geophysics and engineering*

Presented by Diderich Buch, Chief Strategy Officer

### **Tuesday**

10:30 - 11:00

### **Wednesday**

13:00 - 13:30

### **Thursday**

11:30 - 12:00

## About Us

Bluware Corp is a privately owned company that produces game-changing solutions for the most challenging objectives in the petrotechnical world. Bluware's Headwave software platform is used by some of the biggest names in E&P to accelerate digital transformation initiatives, delivering both near-term ROI and long-term strategic value. Working in close collaboration with industry leaders, Bluware develops software that leaps ahead of long-time established offerings to drive business innovation and a whole new way of working.
